# Software Engineer I – Full Stack

**Company:** AiPrise

**Location:** Bengaluru, Karnataka, India

**Job Type:** Full-time

**Experience:** 1+ years

**Compensation:** ■15–30 LPA

## About AiPrise

AiPrise is an AI-powered global compliance platform helping fintechs, marketplaces and payment companies verify and onboard customers worldwide. The platform integrates with 80+ identity and compliance vendors and is building AI-powered agents for KYB, AML, sanctions screening and risk scoring.

## Role Overview

We're looking for a Software Engineer I to help build and scale AiPrise's core compliance platform and AI agent systems. This is a build, ship and own role across backend APIs, data pipelines, third-party integrations, case management and customer-facing tools.

## What You'll Do

- Design, develop and ship production features across the platform.
- Build scalable REST APIs and microservices.
- Develop case-management workflows and KYB/AML business logic.
- Build data pipelines for ingesting, transforming and routing compliance data.
- Integrate with third-party identity and compliance APIs.
- Own features end-to-end from requirements through deployment and monitoring.
- Write clean, maintainable and well-tested code.
- Participate in code reviews and engineering best practices.
- Debug production issues and own incident resolution.
- Improve system performance, reliability and cost-efficiency.
- Build monitoring, alerting and observability into features.
- Collaborate with product, compliance and customer-success teams.
- Contribute to technical and architecture decisions.

## Must-Have Skills

- 0–2 years of professional software engineering experience building and shipping production systems.
- Strong programming fundamentals in Python, Go, Java, Node.js or similar.
- Experience with REST APIs, microservices or distributed systems.
- Strong understanding of PostgreSQL/MySQL and data modelling.
- Familiarity with Git, CI/CD, Docker and modern deployment practices.
- Strong debugging and problem-solving skills.
- Ability to work comfortably in unfamiliar codebases.

- Strong communication skills and ability to translate business needs into technical solutions.

## Nice to Have

- FinTech, RegTech, payments or fraud/risk-detection experience.
- Knowledge of KYC/KYB, AML, sanctions screening or adverse media.
- Kafka, RabbitMQ or AWS SQS experience.
- MongoDB, DynamoDB or Elasticsearch familiarity.
- Third-party API integration experience.
- React and TypeScript experience.
- ML/AI systems or data-intensive applications.
- Kubernetes, Terraform or infrastructure-as-code.

## Interview Process

- **Round 1:** Remote – Exploratory Discussion
- **Round 2:** In-office – DSA / Problem Solving & Coding Assessment, System Design Interview, Product Interview
- **Round 3:** Remote – Technical & Cultural Fit with Head of Engineering
- **Round 4:** Compensation Discussion

## Why AiPrise

- Build mission-critical software focused on fighting financial crime and fraud.
- Work with complex datasets from 200+ countries.
- Join a YC-backed startup with immediate customer impact.
- Ship quickly, with code reaching production in days rather than months.
- Work closely with a fast-moving engineering team.
- Competitive compensation with equity upside.
