Juniper Square

Software Engineer, Intern (India)

About Juniper Square

Our mission is to unlock the full potential of private markets. Privately owned assets like commercial real estate, private equity, and venture capital make up half of our financial ecosystem, yet remain inaccessible to most people. We are digitizing these markets and, as a result, bringing efficiency, transparency, and access to one of the most productive corners of our financial ecosystem.

If you care about making the world a better place by making markets work better through technology, while contributing as a member of a values-driven organization, we want to hear from you.

Juniper Square offers employees a variety of ways to work, ranging from a fully remote experience to working full-time in one of our physical offices. We invest heavily in digital-first operations, allowing our teams to collaborate effectively across 27 U.S. states, 2 Canadian provinces, India, Luxembourg, and England. We also have physical offices in San Francisco, New York City, and Bangalore for employees who prefer to work in an office some or all of the time.

About Your Role

We are seeking highly motivated and enthusiastic Software Development Interns to join our dynamic engineering team. This internship offers a unique opportunity to gain hands-on experience in full-stack web development, AI-assisted software development, and building AI-powered solutions. You'll work on real-world projects using technologies such as Python, React, and modern AI tools while strengthening your software engineering, problem-solving, and Data Structures & Algorithms foundations.

As an intern, you will collaborate with experienced engineers, contribute to production systems, participate in technical discussions, and gain exposure to modern software development practices used to build and scale enterprise-grade applications.

What You'll Do

- Develop web applications using React for the front end and Python for the back end.
- Write clean, efficient, maintainable, and well-documented code.
- Participate in code reviews and learn engineering best practices.
- Leverage AI-assisted development tools to improve productivity, code quality, and execution speed.
- Build and experiment with AI-powered features and solutions using modern AI frameworks and tools.
- Collaborate with team members to solve technical challenges and deliver high-quality software.
- Implement and optimize algorithms and data structures to improve application performance.
- Contribute to the design and implementation of RESTful APIs and GraphQL services.
- Work with databases and perform data manipulation using SQL.
- Participate in technical design discussions, debugging sessions, and problem-solving exercises.
- Contribute actively to Agile ceremonies, sprint planning, and team standups.

Qualifications

- Pursuing or recently completed a B.Tech. degree in Computer Science, Information Technology, or a related field.
- Prior training, project work, competitive programming experience, or internship experience from reputed institutions is highly preferred.
- Familiarity with at least one programming language such as Python, Java, or JavaScript.
- Prior experience with Python and ReactJS is preferred.
- Understanding of web technologies including HTML, CSS, and JavaScript.
- Basic understanding of software testing concepts and methodologies.
- Strong analytical, problem-solving, and debugging skills.
- Excellent attention to detail.
- Strong communication, collaboration, and teamwork skills.
- Ability to learn quickly and adapt to new technologies.
- Familiarity with AI-assisted development tools (e.g., ChatGPT, Claude, Cursor, GitHub Copilot) and a strong interest in building AI-powered applications is highly desirable.
- Exposure to modern AI concepts such as Large Language Models (LLMs), prompt engineering, Retrieval-Augmented Generation (RAG), vector databases, or AI agents is a plus.

What We Offer

Learning Objectives

During this internship, you will gain practical experience in:

Front-End Development

- Building interactive user interfaces with React.js.
- Managing application state and data flow.
- Working with modern JavaScript (ES6+) and front-end development practices.

Back-End Development

- Developing RESTful APIs and GraphQL services using Python frameworks.
- Working with databases and SQL.
- Implementing server-side business logic and data processing.

Data Structures & Algorithms

- Understanding and implementing fundamental data structures such as arrays, linked lists, trees, graphs, and hash maps.
- Applying algorithmic techniques including sorting, searching, recursion, dynamic programming, and graph traversal.
- Strengthening problem-solving and analytical thinking skills.

AI-Assisted Development & AI Engineering

- Leveraging AI tools to accelerate software development and improve code quality.
- Building applications powered by Large Language Models (LLMs).
- Understanding prompt engineering, Retrieval-Augmented Generation (RAG), and AI application architectures.
- Evaluating AI solutions for scalability, reliability, and user experience.

General Software Engineering

- Version control using Git and GitHub.
- Working in an Agile development environment.
- Collaborating effectively within cross-functional engineering teams.

Benefits

- Hands-on experience with modern web development technologies.
- Exposure to AI-assisted software development and real-world AI applications.
- Mentorship from experienced software engineers and technical leaders.
- Opportunity to strengthen software engineering, DSA, and problem-solving skills.
- Exposure to real-world production software systems and development practices.
- Potential for future full-time employment opportunities.
- Competitive internship stipend.
