Data Engineering Intern — External Datasets & Pipelines

Internship | AMEA Data & AI — Commercial IT | Start: August 2026 | Location: India (Hybrid)

Role Type	Internship
Team	AMEA Data & AI — Commercial IT
Reports To	Head of Data & AI, AMEA
Start Date	Jan 2027
Duration	6 months
Location	India (Hybrid)
Primary Project	Marketing Segmentation & Sales Forecasting — External Data Pipelines

About the Role

This internship offers a hands-on opportunity to build real-world data engineering skills on Syngenta's production Databricks platform. The intern will focus on sourcing, ingesting, and structuring external datasets (weather, market intelligence, geo-data, agronomic indicators) that enrich Syngenta's marketing segmentation and sales forecasting models. This is a technically immersive role suited to a final-year engineering or data science student who wants production experience beyond classroom projects.

Key Responsibilities

- Identify, evaluate, and onboard external data sources relevant to agri-marketing and sales forecasting (weather APIs, market data, remote sensing)
- Build ingestion pipelines on Databricks using PySpark or Python to load external data into Delta Lake
- Clean, standardise, and document external datasets to meet Syngenta data quality standards
- Collaborate with the Data Science team to align external features with model input requirements
- Monitor pipeline reliability and set up basic alerting for data freshness and quality
- Maintain data catalogue entries for all external datasets onboarded

Required Skills & Experience

- Pursuing or recently completed a degree in Computer Science, Data Engineering, Statistics, or related field
- Working knowledge of Python (pandas, requests, APIs)
- Basic SQL and understanding of relational or columnar data stores
- Curiosity and ability to learn quickly in a production cloud environment
- Good documentation habits and attention to data quality

Syngenta Technology Stack (Expected Proficiency)

- Databricks (notebooks, Delta Lake, PySpark) — primary platform
- Azure Data Factory — pipeline orchestration
- GitHub — version control
- Microsoft Teams + SharePoint — collaboration
- Lynx AI — AI assistant for code help and productivity

Nice to Have

- Prior internship or project experience with APIs or data pipelines
- Interest in agriculture, weather data, or geospatial analytics
- Exposure to Airflow or similar orchestration tools

What We Offer

- Hands-on experience on a live production Databricks platform
- Mentorship from senior data engineers and AMEA Data & AI lead
- Exposure to end-to-end data engineering in a global FMCG/agri organisation
- Certificate of completion and performance reference
- Potential to convert to NFTE post internship based on performance
