Gen AI Intern — AI Drift Monitoring, Model Monitoring & Cost Analysis

Internship | AMEA Data & AI — Commercial IT | Start: August 2026 | Location: India (Hybrid)

Role Type	Internship
Team	AMEA Data & AI — Commercial IT
Reports To	Head of Data & AI, AMEA
Start Date	Jan 2027
Duration	6 months
Location	India (Hybrid)
Primary Project	AI Drift Monitoring, AI Model Monitoring, Cost Analysis

About the Role

As Syngenta AMEA scales its AI portfolio, maintaining model reliability and cost efficiency is critical. This Gen AI internship focuses on building monitoring frameworks for deployed AI models — tracking prediction drift, data drift, and performance degradation — while also developing cost analysis tooling to track and optimise AI infrastructure spend. The intern will work closely with the Data & AI team and will gain exposure to MLflow, Azure Monitor, and Syngenta's Lynx AI platform.

Key Responsibilities

- Set up and maintain model monitoring pipelines using MLflow and Databricks to detect prediction and data drift
- Build dashboards to visualise model health KPIs — accuracy trends, input distribution shifts, latency, and error rates
- Develop cost tracking reports for AI infrastructure (Azure compute, Databricks DBUs, LLM API costs)
- Identify cost optimisation opportunities — idle clusters, over-provisioned compute, redundant API calls
- Support the team with prompt evaluation and quality monitoring for Gen AI / LLM use cases (e.g. Lynx AI)
- Document monitoring frameworks, thresholds, and escalation procedures

Required Skills & Experience

- Pursuing or recently completed a degree in Computer Science, Data Science, AI/ML, or related field
- Familiarity with Python and ML concepts (model evaluation, metrics, overfitting)
- Basic understanding of Gen AI / LLMs and their operational considerations
- Analytical mindset with ability to interpret monitoring data and surface actionable insights
- Good communication skills for summarising technical findings to non-technical stakeholders

Syngenta Technology Stack (Expected Proficiency)

- Databricks + MLflow — model tracking and drift monitoring
- Azure Monitor / Azure Cost Management — infrastructure monitoring and cost tracking
- Qlik Sense / Power BI — monitoring dashboards
- Lynx AI (Syngenta Gen AI platform) — hands-on exposure to LLM operations
- GitHub — version control
- Microsoft Teams + SharePoint — collaboration

Nice to Have

- Prior exposure to ML monitoring tools (Evidently AI, Whylogs, Great Expectations)
- Interest in FinOps or cloud cost management

- Understanding of responsible AI principles and model governance

What We Offer

- Rare opportunity to work on AI monitoring and governance for a live enterprise AI portfolio
- Exposure to Syngenta's Lynx AI platform and Databricks ecosystem
- Mentorship from Data & AI leadership
- Practical skills in MLOps and Gen AI operations that are highly sought-after
- Certificate of completion and performance reference; conversion opportunity for strong performers
